NOTAS

| Variable | Notas |
|--|---|
| Superficie afectada por plagas y enfermedades forestales | Las fluctuaciones que se observan en los datos responden a la combinación de presupuesto, disponibilidad de aeronaves y esfuerzos de coordinación entre las dependencias responsables de esta labor. 2002: En el caso de Coahuila, Chiapas, Chihuahua, Nayarit, Oaxaca y Sonora la información procede de una detección aérea. Superficie forestal afectada: Otros: Se refiere a otras enfermedades forestales, que por ser diversas y de bajo impacto se integran en una sola categoría como es el caso de: Declinamiento del encino, royas y pudriciones de fuste y raíz, etc. Superficie forestal afectada: Total: Se refiere a la detección y tratamiento |

NOTAS

| Variable | Notas |
|---|---|
| | de barrenadores, defoliadores, descortezadores, muérdago y otras plagas y enfermedades de menor impacto, tales como: enfermedad del declinamiento del encino, así como royas y pudriciones de raíz y fuste, entre otras. El comportamiento dinámico -y explosivo en algunos años- de las plagas, en combinación con variaciones ambientales como la presencia de sequías e incendios, así como variaciones en el vigor mismo del arbolado, explican las fluctuaciones que se observan en los datos. |
| Superficie con diagnóstico sanitario forestal | Las fluctuaciones que se observan en los datos en general obedecen a variaciones en las condiciones ambientales, en el vigor del arbolado y a la dinámica propia de las plagas. |
