|-------------------------------|---|
| Producción forestal maderable | <p>Algunos totales no coinciden con la suma de los parciales debido al redondeo. Las especies forestales explotadas se agrupan en las categorías siguientes: Coníferas. Latifoliadas. Maderas tropicales preciosas v Maderas tropicales comunes. El producto más frecuentemente explotado en selvas, bosques v matorrales es la madera, pero hay otro tipo de materiales que también son explotados, por ello, los bienes forestales se dividen en maderables v no maderables. La producción forestal maderable se subdivide según la especie empleada: a) Pino v otras coníferas que incluye cedro blanco (<i>Cuor essus</i> spp), ciprés (<i>Taxodium</i> spp) v tascate (<i>Juniperus</i> spp), entre otras especies; b) Encino v otras latifoliadas, estas últimas son especies maderables de zonas templadas v semiáridas entre las que destacan: álamo, liuidámbar, mezquite, fresno, nogal v siricote. c) Preciosas: se trata de caoba (<i>Switenia macrophilla</i>) v cedro rojo (<i>Cedrella odorata</i> v <i>C. mexicana</i>), especies que por sus propiedades v características estéticas son de alta estimación v tienen un alto valor comercial. d) Comunes: se refiere a las especies maderables de clima tropical distintas a la caoba v al cedro rojo, entre las cuales están: Chechen, iabín, pucté, manole rojo, ébano, habillo, primavera v ceiba. De acuerdo a los usos principales de la madera en México tenemos la Escudría: madera rolliza destinada principalmente a la producción de tablas v tablones, vigas v material de empaque. Chapa: lámina delgada de madera de dimensiones variables obtenida por el torneado o rebanado de la madera en rollo, que se utiliza para ser pegada con otro material. Postes, pilotes v morillos: maderas rollizas destinadas a soportar redes de cables v bases para cercas. También se utilizan como soporte v travesaños en las estructuras de sostén v armazones de los ductos subterráneos de las minas, así como parte estructural de construcciones.</p> |
