## NOTAS

Variable	Notas
Producción forestal maderable	<p>Algunos totales no coinciden con la suma de los parciales debido al redondeo. Las especies forestales explotadas se agrupan en las categorías siguientes: Coníferas, Latifoliadas, Maderas tropicales preciosas y Maderas tropicales comunes. El producto más frecuentemente explotado en selvas, bosques y matorrales es la madera, pero hay otro tipo de materiales que también son explotados, por ello, los bienes forestales se dividen en maderables y no maderables. La producción forestal maderable se subdivide según la especie empleada: a) Pino y otras coníferas que incluye cedro blanco (<i>Cupressus</i> spp), ciprés (<i>Taxodium</i> spp) y tascate (<i>Juniperus</i> spp), entre otras especies. b) Encino y otras latifoliadas, estas últimas son especies maderables de zonas templadas y semiáridas entre las que destacan: álamo, liquidámbar, mezquite, fresno, nogal y siricote. c) Preciosas: se trata de caoba (<i>Swietenia macrophylla</i>) y cedro rojo (<i>Cedrella odorata</i> y <i>C. mexicana</i>), especies que por sus propiedades y características estéticas son de alta estimación y tienen un alto valor comercial. d) Comunes: se refiere a las especies maderables de clima tropical distintas a la caoba y al cedro rojo, entre las cuales están: Chechen, jabín, pucté, mangle rojo, ébano, habillo, primavera y ceiba. De acuerdo a los usos principales de la madera en México tenemos la Escuadría: madera rolliza destinada principalmente a la producción de tablas y tablonés, vigas y material de empaque. Chapa: lámina delgada de madera de dimensiones variables obtenida por el torneado o rebanado de la madera en rollo, que se utiliza para ser pegada con otro material. Postes, pilotes y morillos: maderas rollizas destinadas a soportar redes de cables y bases para cercas. También se utilizan como soporte y travesaños en las estructuras de sostén y armazones de los ductos subterráneos de las minas, así como parte estructural de construcciones. Se presentan datos publicados en los anuarios forestales que se indican en la fuente. El Anuario más reciente disponible corresponde al año 2018 y fue publicado en 2021. Se presenta la información más reciente disponible (revisión: Agosto, 2021). 2013: Los datos de Tabasco fueron modificados por la Dirección General de Gestión Forestal y de Suelos respecto de lo publicado en el Anuario correspondiente; con base en notificación oficial (23 de abril de 2015) de la Delegación Federal de SEMARNAT en Tabasco, el total del estado cambió de cero a 74,235 t, modificando por tanto el total nacional que pasó de 5,882,859 t a 5,957,094 t. Con motivo de la reforma de la Constitución Política de los Estados Unidos Mexicanos publicada el 29 de enero de 2016 en el Diario Oficial de la Federación, el Distrito Federal cambió su denominación a Ciudad de México. La información correspondiente a dicha entidad se presenta con este nuevo nombre.</p>
