NOTAS

Variable	Notas
Población - Conciliación 2006	Información de población correspondiente al ejercicio de conciliación demográfica efectuado por CONAPO, INEGI y COLMEX que consiste, básicamente, en la valoración simultánea del Censo de 2005 y el Censo de 2000, incorporando la dinámica demográfica ocurrida durante el periodo intercensal; es decir, se agregan a la población de 2000 los nuevos nacimientos, se le restan las defunciones y el saldo neto migratorio con el exterior, y el resultado se contrasta con población enumerada en 2005. La conciliación asegura congruencia de las poblaciones por edad y sexo entre los dos levantamientos censales. Urbanas son las localidades con 15 mil o más habitantes; rurales (no urbanas) son las localidades con menos de 15 mil habitantes. La distribución de la población por ámbito de residencia se estima con base en las proyecciones de población por tamaño de localidad actualizadas en 2003.
